# Checkpoint 3 - Basic Functionality

Professor Hansel Ong  
Raviteja Tanikella

Project Name: ATSPPro

## Remaining Work for the Beta Phase

### 1. Gemini LLM Integration

Finish integrating the Google Gemini Pro LLM into the App.

**Tasks:**

- Finalize the integration of the Gemini LLM API into the application's backend.
- Conduct thorough testing to ensure the LLM functions seamlessly with existing features.

### 2. Download Functionality

Implement the functionality that allows users to download their conversations and responses in PDF format for offline reference and record-keeping.

**Tasks:**

- Develop the backend logic to convert conversations into a PDF format, ensuring formatting remains consistent and clear.

### 3. User Profile Settings

Complete the implementation of user profile settings on the Home screen to enhance user experience by allowing personalization of the app environment.

**Tasks:**

- Finalize the profile settings section which includes user account profile details such as updating personal information and default resume.
- Develop and integrate theme settings allowing users to choose and apply different visual themes for the app interface according to their preference.
- Add an 'About' section that provides information about the app, such as version number, developers, and other relevant details.
